To Whom It May Concern –

Re.: Client Reference – Soil Hazard Classification (Disposal) Testing

The Department of Human Services, Prahran Precinct Redevelopment Project, required ongoing services from your firm over an extended period of time for the testing and classification-for-disposal of excess soil generated.

The project required an environmental consultant that was very knowledgeable in the application of EPAV guidelines and (to the extent possible) effective at minimising the costs of soil disposal. Moreover, we required a consultant that was very responsive in its level of service.

As Project Engineer for the project I am happy to confirm our satisfaction with Atma Environmental. Your advice has been instrumental in controlling the remediation costs at this site, while providing all reports to a high standard – there have been no issues with the acceptance (by landfill) of any soil leaving the site.

On many occasions we required consultants on site with short notice; and Atma Environmental was able to meet our requirements. This was appreciated as it was a tight site with little room for soil stockpiles.

I am happy to recommend Atma Environmental for any project requiring soil hazard classification.

Yours sincerely,

KANE CONSTRUCTIONS PTY LTD
