Mr. Berry;

**Re: PMP Reference for Atma Environmental**

PMP Limited is one of the largest printing and distribution companies of catalogues, magazines and marketing materials in Australasia and is the largest heat-set web offset printer in Australasia. Within the 'PMP Print' Division services include: *Directories Printing, Retail Printing, Publishing, Government Printing, and Corporate Printing* across Australia from major facilities located in Melbourne, Perth, Sydney and Brisbane.

In January 2012 PMP approached your firm with a view to having appropriate environmental contamination testing performed at its Clayton, Vic site premises to assist in its divestment. Your company soon provided a highly detailed review of the site history (operating since the 50s) enabling us to then further complete a targeted and cost-effective Phase 2 soil and groundwater investigation confidently establishing the likely environmental liabilities at the site as part of the disclosure documentation.

In completing the site investigation works the feedback from my team about your team has included comments such as "**brilliant operators**". You can be very proud of your team as we have been wholly satisfied with Atma Environmental's attention to: Health and Safety within an operational environment, project communication, project cost estimating, and **overall excellence** in the way the project was completed.

This is why PMP has further instructed Atma Environmental to carry our similar Phase 1-2 ESA works at our other major facilities located in Perth, Sydney and Brisbane; with those works now well underway.

In summary, Atma Environmental has been instrumental in assisting PMP Limited achieve a significant, strategic corporate objective. Your firm did this by giving us straight advice, meeting its promises and working without incident (in occasionally trialling circumstances) to deliver excellent results.

I would be happy to recommend Atma Environmental to any prospective future clients.

Regards,

John Nichols  
General Manager Transformation
